Lecture 0: Introduction

Yi, Yung (이융)

EE210: Probability and Introductory Random Processes
KAIST EE

August 22, 2022

Outline

- Course logistics
- Why this course?

Instructor

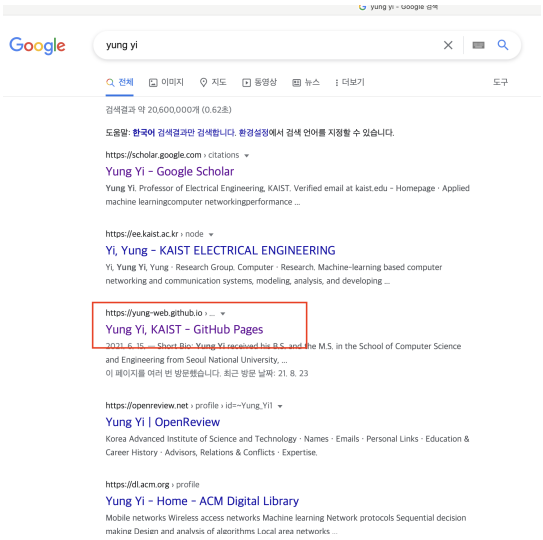
- Yi, Yung (이융)
- Office: N1, 810
- Homepage: `https://yung-web.github.io/home/`
- E-mail: `yiyung@kaist.edu`
- Computer Division
- In KAIST EE since 2008

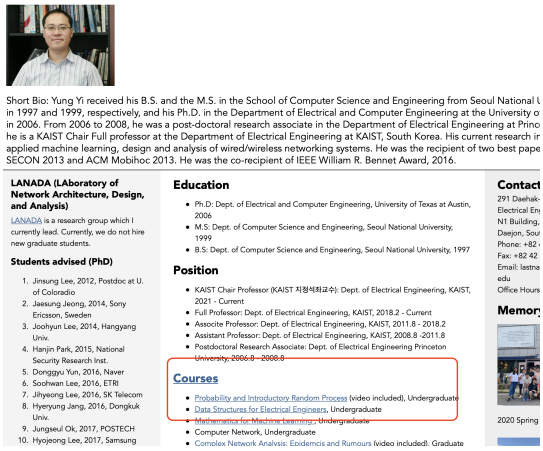
How to Run This Course

- non-real-time online ($\leq$50%) + real-time offline/online ($\geq$ 50%)
- All lecture videos have already been pre-recorded. Available in YouTube.
- non-real-time online: Just watch anytime and anywhere you like.
- realtime offline/online: Watch lecture videos in the classroom or in the zoom, with asking and answering questions.
- No attendance check!

Accesing Lecture Videos and Slides

- Method 1: `https://yung-web.github.io/home/courses/probability.html`
- Method 2: (a) Type Yung Yi in the google, (b) visit his GitHub homepage, (c) find the links on Course.



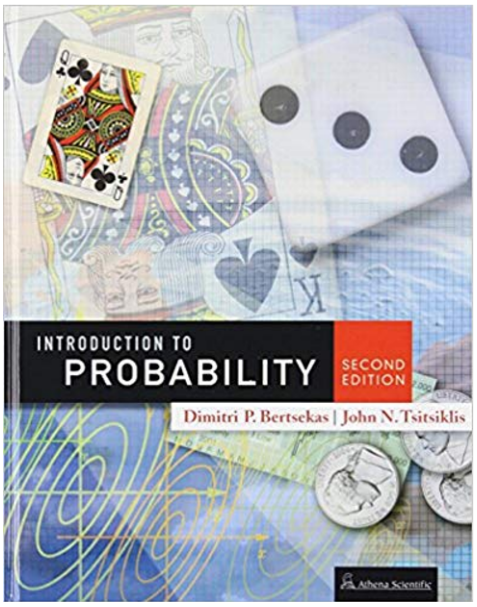


Using KLMS

- All notifications and announcements (also sent to you via email)
- Questions about course contents
  - Only through posting in KLMS (so should be in English)
  - NOT individual emails to the lecturer or the TAs
- Homework upload
- Score upload and all the grade-related things

Textbook

- Introduction to Probability (2nd edition)
  - MIT course textbook
  - Dimitri P. Bertsekas and John N. Tsitsiklis
- You can order it from Yes24, Aladin, Kyobo
  - Yes24: `http://www.yes24.com/Product/Goods/3995311`
  - Aladin: `https://www.aladin.co.kr/shop/wproduct.aspx?ItemId=12945615`
  - Kyobo: `http://www.kyobobook.co.kr/product/detailViewEng.laf?ejkGb=ENG&mallGb=ENG&barcode=9781886529380&orderClick=LAG&Kc=`



Texbook Homepage

- `http://athenasc.com/probbook.html`
- Problem solutions
- Links to the MIT courses
- You can find the urls (2006, 2010, 2013) for the MIT lectures based on the same textbook, where there are many useful resources (recitation problems, homework problems, old exam problems, etc)
- Some of my lecture slides are based on theirs, but my slides are largely modified/reorganized/edited in many places for our purpose.

Course Contents (Guided Schedule for Your Study)

1. Probabilistic model (1/2 week)
2. Conditioning and Independence (1/2 week)
3. Random Variable, Part I (Discrete Random Variable) (1.5 week)
4. Random Variable, Part II (Continuous Random Variable) (1.5 week)
5. Random Variable, Part III (Advanced Topic on Random Variable) (1.5 week)
6. Limit of Scaled Sum of Random Variables: Central Limit Theorem and Weak Law of Large Numbers (1.5 week)
7. Random Process: Bernoulli and Poisson Processes (2 week)
8. Random Process: Markov Chain (2 week)
9. Introduction to Statistical Inference (2 week)

Exams and Homeworks

- 2 Exams (mid-term and final)
- Homeworks
  - All problems are from exercise problems in the textbook.
  - We do NOT check whether you copy your solution from the prolem solutions or not.
- 9 Homeworks for each of 9 chapters.

Other QnA

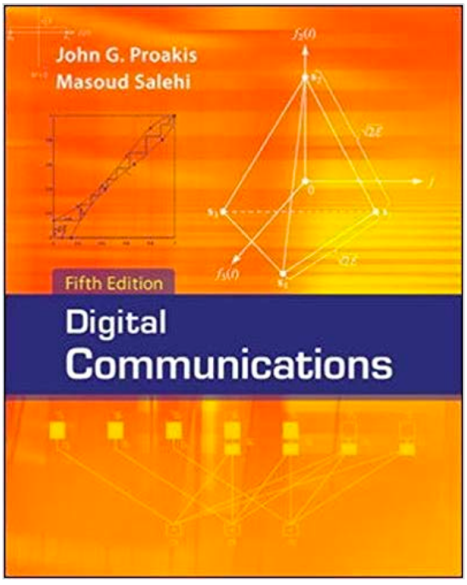
- Read ALL the emails and sms from KLMS.
- OK not to be present in the classroom? Yes
- OK that my homework solutions is sams as those in the solutions book? Yes
- Can I ask for a personal meeting to ask quetions or get other general advices? Yes. Send me an email.

Questions?

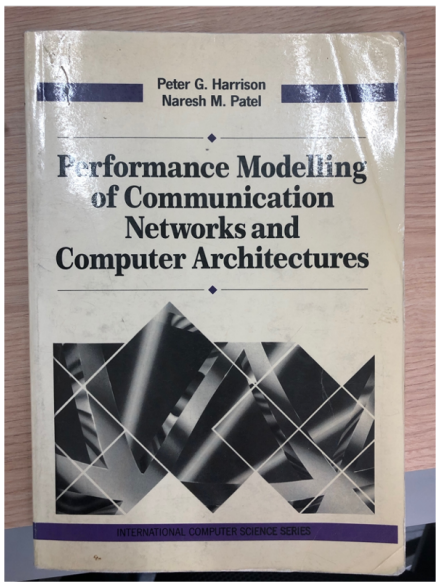
Why Probability?

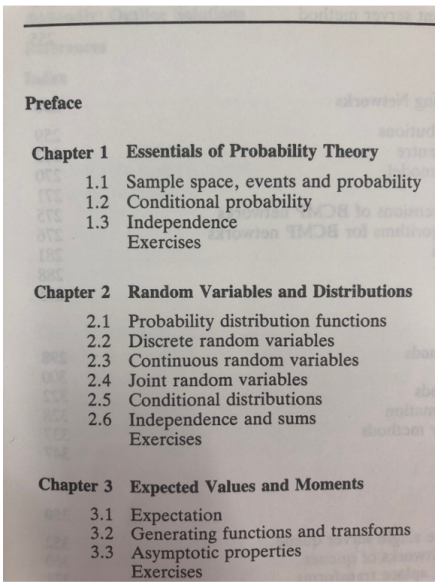
- Many things are "probabilistic"
- Assume that you are a designer of the following engineering systems. Good design?
  - a web server
  - a communication device like mobile phones
  - an AI-based image classifier
- From an engineering point of view,
  - System input
  - Algorithms in systems
  - Analysis of systems

Textbook: Digital Communication



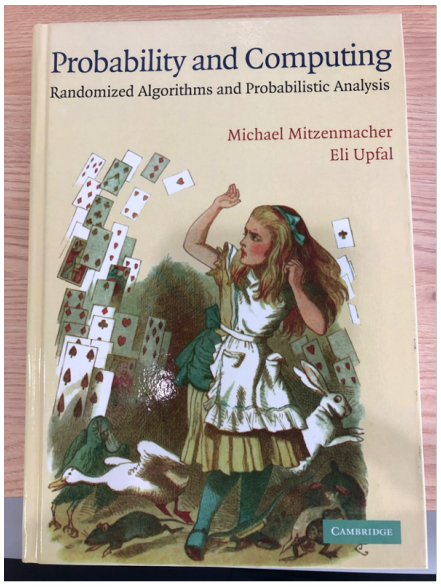
Textbook: Computer Networking

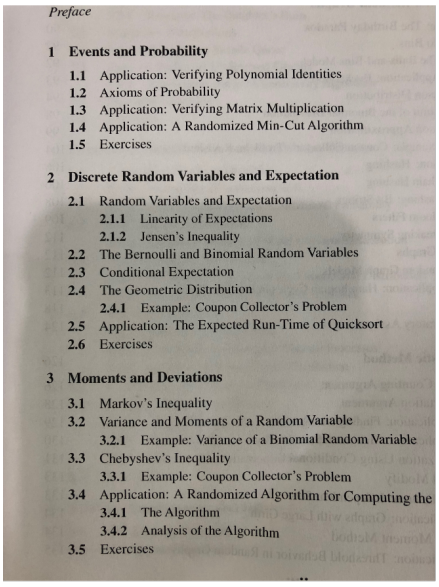




Preface

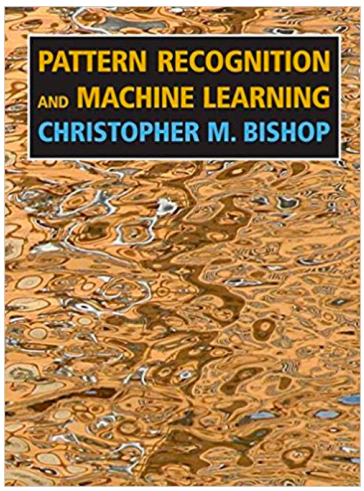
Textbook: Algorithm and Computing

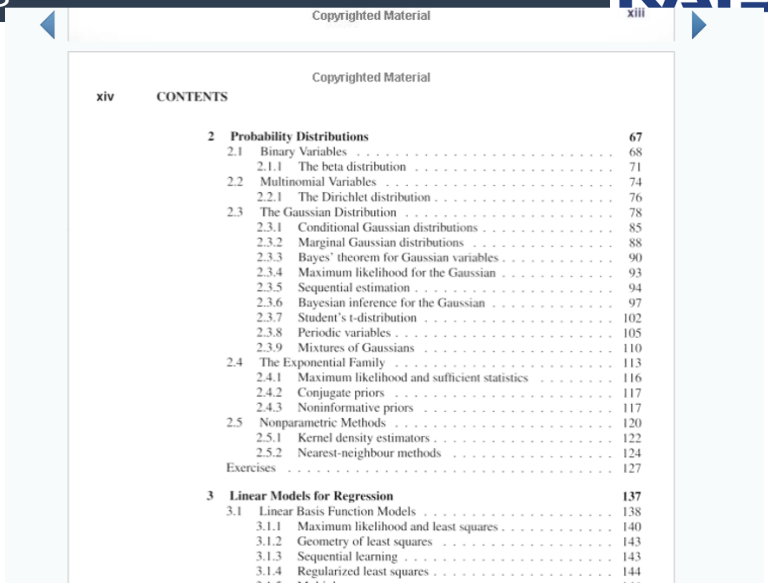




Preface

Textbook: Machine Learning





These days, every area in CS and EE is directly or indirectly related to machine learning!

How to take this course? A designer's perspective

- Designer's perspective?
- In the year of 2021, suppose that unfortunately there is no theory of mathematically studying the *uncertainty* of some phenomena, events, etc.
- You have to design such a theory called "probability". How are you going to do it? Where are you going to start?
- You just have other basic mathematical theories such as set theory.
- You need to get used to the English terms on probability (e.g., sample space = 표본공간, probability density function = 확률밀도함수).
- We will take this exciting journey from the next lecture!

Questions?
