

Lecture 0: Introduction

Yi, Yung (이웅)

EE210: Probability and Introductory Random Processes
KAIST EE

MONTH DAY, 2021

- Course logistics
- Why necessary to take the course of probability and random process?

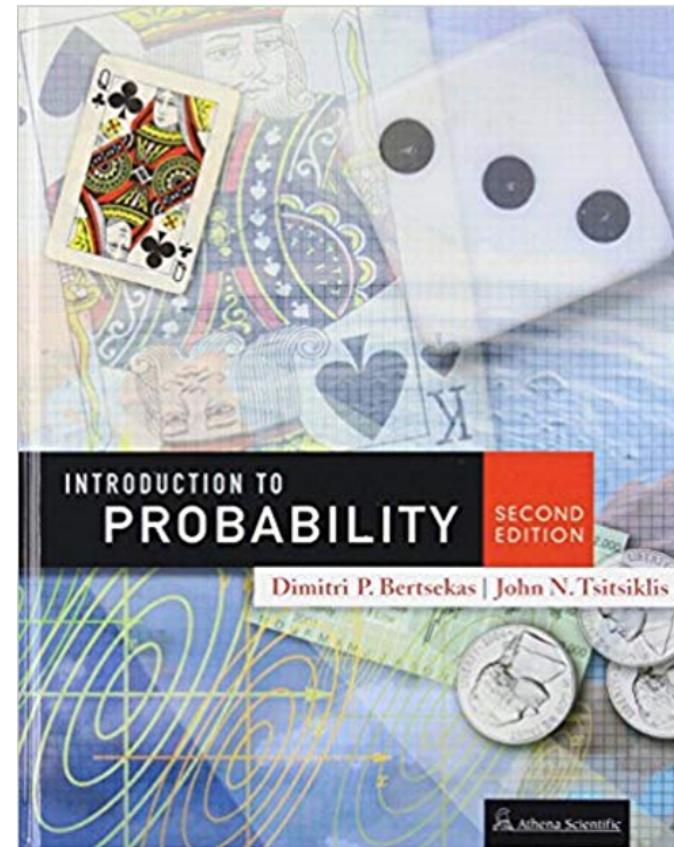

- Yi, Yung (이융)
- Office: N1, 810
- <http://lanada.kaist.ac.kr>, yiyung@kaist.edu
- Computer Division
- A professor in KAIST EE since 2008
- Office hours: TBA

- A
- B
- C

- Mailing list: ee210@lanada.kaist.ac.kr
 - Please use KLMS for the questions about the lecture contents
 - This mailing list can be used for individual issues

- <http://klms.kaist.ac.kr/>
- To download course materials
- To ask questions about everything
- To check your score on each homework/exam
- To see all the announcements about the class

- Introduction to Probability
(2nd edition)
 - MIT course textbook
 - Dimitri P. Bertsekas and John N. Tsitsiklis

- Three Parts
 - Part I: Fundamentals of Probability
 - Part II: Inference and Limit Theorems
 - Part III: Random Processes
- On-line lectures at MIT and EdX
 - MIT: <http://bit.ly/2PkvYdr>
 - EdX: <http://bit.ly/3pHmZRd>
 - You can find older urls (2006, 2010, 2013) for this lecture, where there are many useful resources (recitation problems, homework problems, old exam problems, etc)
 - My lecture slides: based on theirs, but largely modified/reorganized/edited in many places for KAIST students

- In-class quiz (sometimes)
- Basically, weekly homework, but often bi-weekly
- 3 Exams (2 mid-terms and 1 final)
- Class participation
- Grading portions: A (X%), B (Y%), C(Z%), D(W%), F . . .
- Online lectures due to COVID-19 may change how to grade.

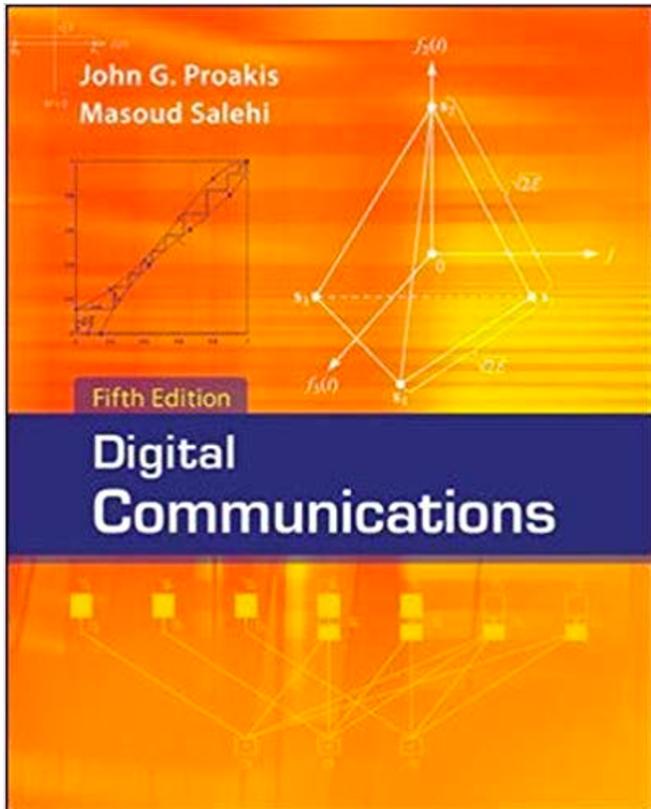

- Most should be via KLMS
 - Technical questions about lectures, homework, and etc
- Please DO NOT individually send emails to Prof. Yung Yi and TAs (or making calls or sending KakaoTalk msgs) about the technical questions (course contents, homework, etc)
 - All the questions need to be shared among the students.
 - TAs and Prof. Yung Yi will handle your questions as soon as possible.
 - But, you can send an email to Prof. Yung Yi for the things that need to be individually discussed.

Questions?

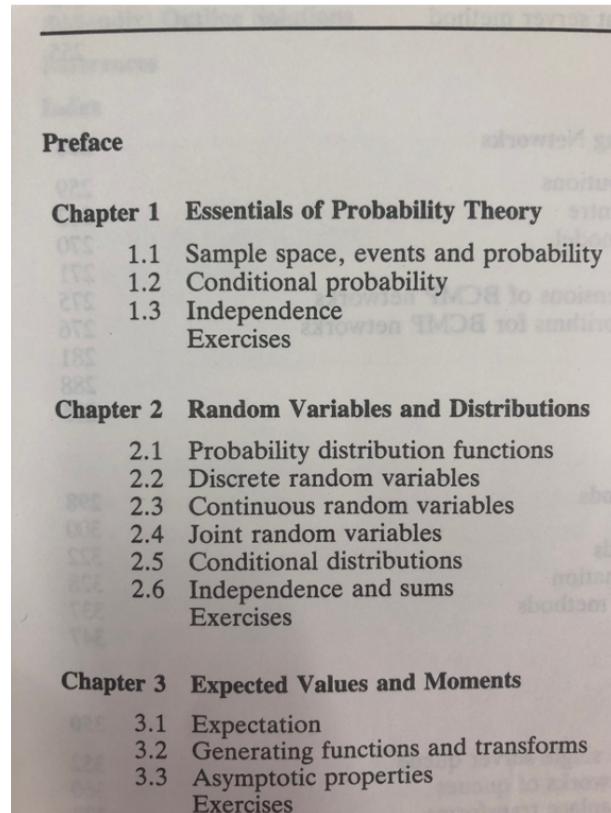

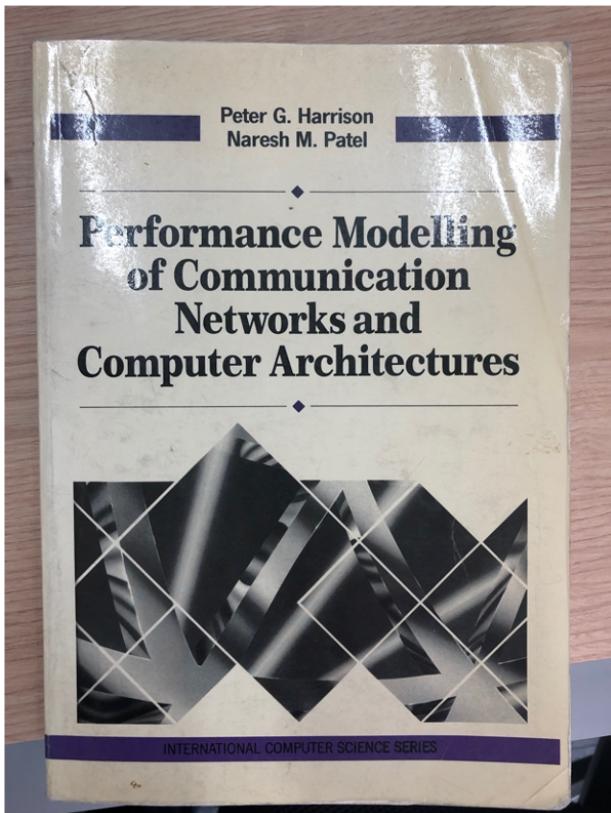

- Many things are "probabilistic"

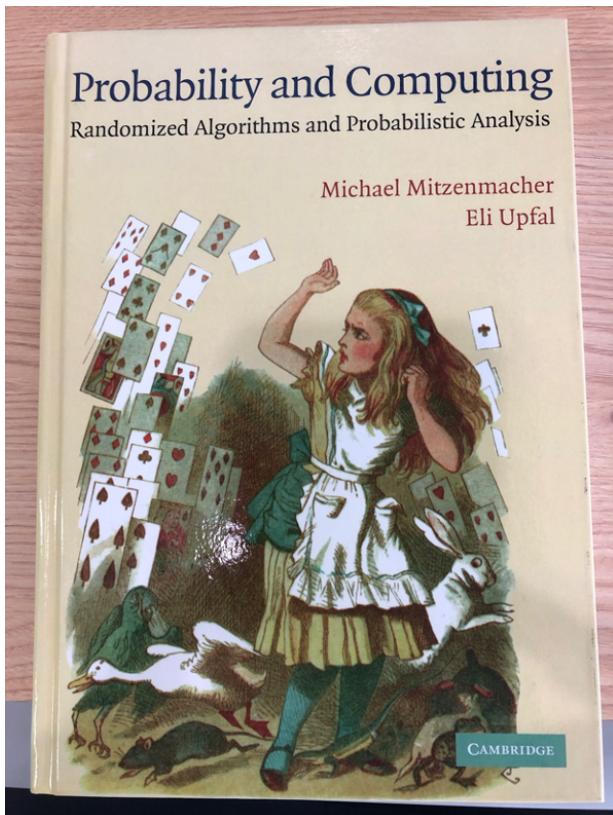

- Many things are "probabilistic"
- Assume that you are a designer of the following engineering systems. Good design?
 - a web server
 - a communication device like mobile phones
 - an AI-based image classifier

- Many things are "probabilistic"
- Assume that you are a designer of the following engineering systems. Good design?
 - a web server
 - a communication device like mobile phones
 - an AI-based image classifier
- From an engineering point of view,
 - System input
 - Algorithms in systems
 - Analysis of systems

Communications	13
1-5 Overview of the Book	16
1-6 Bibliographical Notes and References	16
 2 Probability and Stochastic Processes	 17
2-1 Probability	17
2-1-1 Random Variables, Probability Distributions, and Probability Densities	22
2-1-2 Functions of Random Variables	28
2-1-3 Statistical Averages of Random Variables	33
2-1-4 Some Useful Probability Distributions	37
2-1-5 Upper bounds on the Tail Probability	53
2-1-6 Sums of Random Variables and the Central Limit Theorem	58
2-2 Stochastic Processes	62
2-2-1 Statistical Averages	64
2-2-2 Power Density Spectrum	67
2-2-3 Response of a Linear Time-Invariant System to a Random Input Signal	68
2-2-4 Sampling Theorem for Band-Limited Stochastic Processes	72
2-2-5 Discrete-Time Stochastic Signals and Systems	74
2-2-6 Cyclostationary Processes	75
2-3 Bibliographical Notes and References	77
Problems	77

Preface

1 Events and Probability

- 1.1 Application: Verifying Polynomial Identities
- 1.2 Axioms of Probability
- 1.3 Application: Verifying Matrix Multiplication
- 1.4 Application: A Randomized Min-Cut Algorithm
- 1.5 Exercises

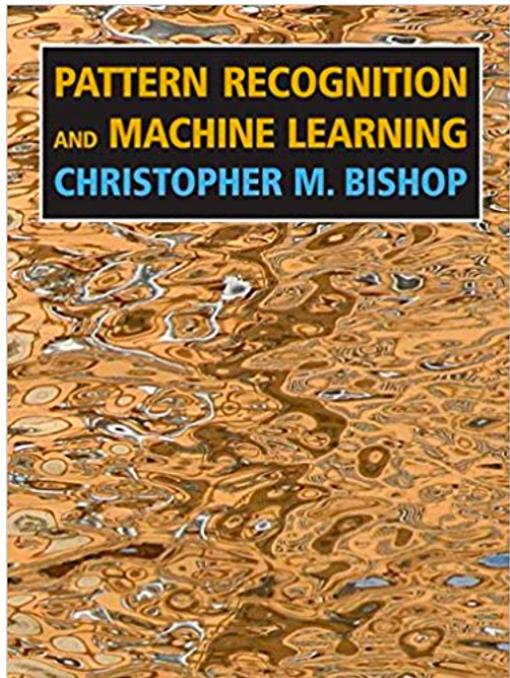

2 Discrete Random Variables and Expectation

- 2.1 Random Variables and Expectation
 - 2.1.1 Linearity of Expectations
 - 2.1.2 Jensen's Inequality
- 2.2 The Bernoulli and Binomial Random Variables
- 2.3 Conditional Expectation
- 2.4 The Geometric Distribution
 - 2.4.1 Example: Coupon Collector's Problem
- 2.5 Application: The Expected Run-Time of Quicksort
- 2.6 Exercises

3 Moments and Deviations

- 3.1 Markov's Inequality
- 3.2 Variance and Moments of a Random Variable
 - 3.2.1 Example: Variance of a Binomial Random Variable
- 3.3 Chebyshev's Inequality
 - 3.3.1 Example: Coupon Collector's Problem
- 3.4 Application: A Randomized Algorithm for Computing the
 - 3.4.1 The Algorithm
 - 3.4.2 Analysis of the Algorithm
- 3.5 Exercises

Textbook: Machine Learning

xiv CONTENTS		Copyrighted Material
		Copyrighted Material
2 Probability Distributions		67
2.1 Binary Variables		68
2.1.1 The beta distribution		71
2.2 Multinomial Variables		74
2.2.1 The Dirichlet distribution		76
2.3 The Gaussian Distribution		78
2.3.1 Conditional Gaussian distributions		85
2.3.2 Marginal Gaussian distributions		88
2.3.3 Bayes' theorem for Gaussian variables		90
2.3.4 Maximum likelihood for the Gaussian		93
2.3.5 Sequential estimation		94
2.3.6 Bayesian inference for the Gaussian		97
2.3.7 Student's t-distribution		102
2.3.8 Periodic variables		105
2.3.9 Mixtures of Gaussians		110
2.4 The Exponential Family		113
2.4.1 Maximum likelihood and sufficient statistics		116
2.4.2 Conjugate priors		117
2.4.3 Noninformative priors		117
2.5 Nonparametric Methods		120
2.5.1 Kernel density estimators		122
2.5.2 Nearest-neighbour methods		124
Exercises		127
3 Linear Models for Regression		137
3.1 Linear Basis Function Models		138
3.1.1 Maximum likelihood and least squares		140
3.1.2 Geometry of least squares		143
3.1.3 Sequential learning		143
3.1.4 Regularized least squares		144

These days, every area in CS and EE is directly or indirectly related to machine learning!

- Designer's perspective?

- Designer's perspective?
- In the year of 2021, suppose that unfortunately there is no theory of mathematically studying the *uncertainty* of some phenomena, events, etc.

- Designer's perspective?
- In the year of 2021, suppose that unfortunately there is no theory of mathematically studying the *uncertainty* of some phenomena, events, etc.
- You have to design such a theory called "probability". How are you going to do it?
Where are you going to start?
- You just have other basic mathematical theories such as set theory.

- Designer's perspective?
- In the year of 2021, suppose that unfortunately there is no theory of mathematically studying the *uncertainty* of some phenomena, events, etc.
- You have to design such a theory called "probability". How are you going to do it?
Where are you going to start?
- You just have other basic mathematical theories such as set theory.
- You need to get used to the *English terms* on probability (e.g., sample space = 표본공간, probability density function = 확률밀도함수).

- Designer's perspective?
- In the year of 2021, suppose that unfortunately there is no theory of mathematically studying the *uncertainty* of some phenomena, events, etc.
- You have to design such a theory called "probability". How are you going to do it?
Where are you going to start?
- You just have other basic mathematical theories such as set theory.
- You need to get used to the *English terms* on probability (e.g., sample space = 표본공간, probability density function = 확률밀도함수).
- We will take this exciting journey from the next lecture!
